

## ABOUT POLYMER BANKNOTES

Polymer banknotes are produced from a thin, transparent and flexible plastic film made from a versatile and complex material.

### CLEANER

Polymer banknotes are cleaner and more hygienic than paper notes because they are resistant to dirt, moisture, water and other liquids.

### SAFER

Polymer banknotes allow for the incorporation of advanced security features, thus making the notes more difficult to counterfeit.

### STRONGER

Polymer is stronger and more durable than paper. Therefore, polymer banknotes are expected to last at least 50% longer than paper notes. This also makes the notes more environmentally friendly.

## New Banknote

For more information, see: [www.boj.org.jm](http://www.boj.org.jm)

## FRONT

## REVERSE

## FEEL

- 1 Run your fingers over the top right hand corner of the back of the note to feel the raised dots feature, which is for the visually impaired.

## LOOK

When the note is held up to light:

- 2 A clear window can be seen from both the front and the back of the note.
- 3 The letters BOJ appear in an area of coloured print.

## TILT

As you tilt the note:

- 4 Areas with a shimmering gold ink can be seen.
- 5 There is a silver ink that has a highly reflective mirror-like finish.

## CHECK

Using an ultra-violet (UV) light:

- 6 Some areas of the note glow in 2 colours.
- 7 The denomination appears.
